ElringKlinger, Fuel-Cell Industrialisation Team

ElringKlinger

12 June 2026

Application: Pflichtpraktikant Industrialisierung Brennstoffzelle (m/w/d)

I am applying for the mandatory internship in fuel-cell industrialisation. The tasks you describe, process optimisation in stack building and the commissioning of new assembly and test equipment with planned test series, are exactly what I have done hands-on: at Ecogenium I engineered, fabricated and commissioned a standalone fuel-cell test bench and ran structured experiments and measurement series (purging, humidity cycling, polarisation curves), and I prototype and produce parts with metal 3D printing (DMLS) and a solid grasp of DFM and DFAM.

I also understand the fuel cell as a system. At DLR I am developing the fuel-cell system for a hydrogen aircraft, including component selection against derived specifications, and at Robert Bosch I worked on fuel-cell operating strategy and the analysis behind it. I can move between a production process, the test that validates it and the data that proves it out, and I document carefully.

ElringKlinger's fuel-cell stack production near Stuttgart is a strong fit for me in both topic and location, since I am based in Renningen. My German is at B1 and my English is fluent. I would welcome the chance to support your industrialisation projects.

Yours sincerely,

Vallabh Pataneni
