Reverion, Process Engineering Team

Reverion

12 June 2026

Application: Masterarbeit / Semesterarbeit Process Engineering (d/w/m)

I am applying for the Master's thesis in Process Engineering. Building and commissioning a test rig is the work I enjoy most: at Ecogenium I engineered, fabricated and electronically integrated a standalone fuel-cell test bench from scratch and used it to run controlled experiments, so setting up your pressure chamber and a clean test campaign for different insulation materials is familiar ground.

The thermal-conductivity side fits my recent work directly. At DLR I built a thermal-management model for a 150 kW aircraft fuel-cell system, deriving coolant flow, temperature ranges and heat-exchanger requirements, so characterising how materials conduct and insulate heat under varying conditions is something I have reasoned about quantitatively. I design and detail parts in SolidWorks and CATIA V5, and I document and analyse test data carefully.

Reverion's reversible plants and their drive toward CO₂-negative, high-efficiency energy are the kind of engineering I want to contribute to, and a hands-on thesis combining rig build, measurement and materials is a strong match for me. My English is fluent and my German is at B1. I would be glad to discuss the topic with you.

Yours sincerely,

Vallabh Pataneni
